About

Full-stack developer from Slovenia with several years of professional experience building and maintaining production applications for local and international clients.

My primary focus is Vue.js, Nuxt.js and TypeScript, with a particular interest in building full-stack applications using Nuxt/Nitro. I also have experience with Python/FastAPI, PostgreSQL, Docker and Linux, allowing me to work across the application stack rather than focusing exclusively on frontend development.

In my recent work, I've taken on responsibilities beyond feature development, including technical decision-making, architecture, advising, large-scale refactoring, performance optimization and establishing development practices across teams.

I enjoy working on technically challenging projects, improving existing codebases, and taking ownership of features from initial design through to production.

Core Skills

Frontend & Full-Stack

- **Vue.js, Nuxt.js, Nuxt/Nitro**
- **TypeScript, JavaScript**
- HTML, CSS, SCSS
- Tailwind CSS, Vuetify, Quasar, RekaUI, Shadcn
- Responsive UI and application architecture
- Server-side rendering and web performance

Backend

- **Python, FastAPI, Flask, PHP (Laravel)**
- Node.js
- REST APIs and third-party integrations
- PostgreSQL, MySQL, MariaDB, Oracle
- SQLAlchemy, Prisma, Peewee

Development & Infrastructure

- **Git, GitHub, GitLab, Bitbucket, Gitea**
- **Docker**
- Linux / Bash
- CI/CD
- Kubernetes
- Application testing with Vitest and Playwright

Other

- Tauri / desktop application development
- Electron
- Android development
- OpenGL
- Geospatial and image-processing workflows
- Basic C/C++ and PHP

Education

2004 - 2014

OŠ Dušana Muniha

2014 - 2018

Šolski Center Nova Gorica - Computer Science program

2018 - 2022

Faculty of Computer and Information Science at the University of Ljubljana

Experience

Frontend & Full-Stack

Since becoming self-employed, I have worked on a range of diverse projects, including:

- **Onixweb/Managesports projects:**
Collaborated with Onixweb d.o.o. to build many comprehensive CMS systems, registration platforms, and websites. It includes websites for [KZS](#) (design adapted also for [ParavolleyEurope](#) and [OZS](#)), OKS app for managing volunteers, [DVS](#), KZS storage management app
- **Vehicle PDR Logging Application:** A tool for logging and managing vehicle paintless dent repair (PDR) data. Custom adaptation for [DAS automotive](#)
- **Vehicle estimation application:** A tool for automated work connecting cameras and reporting with my app
- Working with US based companies: [muveotech.io](#) and [opflo.com](#) on web application development.
- **Image generator:** A user-friendly application that enables quick image generation by automatically fetching relevant data. With advanced editing options, users can fine-tune templates to customize their designs efficiently.

- **Astral8**: Worked on an emergency management platform for fire departments using Vue/Nuxt. Beyond feature development, took responsibility for technical decisions, architecture, advising, and large-scale codebase improvements. Led major cross-cutting refactors including a timezone overhaul across the application, reusable data-table architecture, Nuxt 4 migration, i18n modernization, performance improvements, testing infrastructure, and a large Tailwind/design-token refactor.
- **Ventic**: Open-source cross-platform media player built as a personal project using Nuxt and Tauri, integrating native video playback, Android/Android TV, and other low-level platform functionality.

Software Developer

[Flycom Technologies d.o.o. \(2021\)](#)

Designed and developed a program for automatic data synchronization. Gained experience working with LiDAR, photogrammetry, thermal imaging, and processing geospatial data.

Software Development Intern

[Smarteh \(2017\)](#)

Developed automation solutions to transfer data from Excel into various data formats, improving workflow efficiency.
